## Summer Solstice 2023

The summer solstice occurs at the moment the earth's tilt toward the sun is at a maximum. Therefore, on the day of the summer solstice, the sun appears at its highest elevation with a noontime position that changes very little for

several days before and after the summer solstice. In fact, the word solstice comes from Latin solstitium or sol (the sun) + -stit-, -stes (standing). The summer solstice occurs when the sun is directly over the Tropic of Cancer, which is located at 23.5° latitude North, and runs through Mexico, the Bahamas, Egypt, Saudi Arabia, India, and southern China. The sun will be directly over the Tropic of Cancer on **Wednesday, Jun 21, 2023 at 8:57 AM MDT**. For every place north of the Tropic of Cancer, the sun is at its highest point in the sky and this is the longest day of the year.
